

## Testimonial

16 February 2026

I am pleased to provide this testimonial for Noah Feng Xiang Al-Soodinay, who was attached to our team as a DevOps Engineering Intern from 2 September 2025 to 16 February 2026. As his day-to-day mentor, I worked closely with Noah throughout his 24-week attachment and had the opportunity to observe his growth firsthand.

Noah joined us with a solid foundation in IT and adapted quickly to the demands of a professional engineering environment. From early on, he showed a genuine eagerness to learn, picking up enterprise tools and workflows well beyond what would typically be expected of an intern, and consistently applying himself even when tasks were challenging or ambiguous.

Over the course of his attachment, Noah took ownership of meaningful, hands-on work across CI/CD pipeline engineering, security automation, deployment support, and access governance. He developed automation scripts that significantly reduced manual effort for the team and contributed to security tooling that has since been adopted for ongoing use. What impressed me was not just the technical output, but the way he approached each task: iterating based on feedback, troubleshooting methodically, and taking the initiative to improve things beyond the initial brief.

Noah is also a reliable and collaborative team member. He communicated clearly, escalated blockers appropriately, documented his work thoroughly, and made a point of upskilling during quieter periods. He worked well with colleagues across different teams and always represented himself professionally.

I have no hesitation in recommending Noah for roles in DevOps, software engineering, or any technology-related field. He leaves behind work that the team will continue to benefit from, and I am confident he will bring the same dedication and capability to his future endeavours.

Yours sincerely,
